# Sonderhoff USA: anniversary and open house

Sonderhoff USA Corp. turns 10 this year and will have its anniversary celebration on August 9th, 2013. There will be an open house event for customers, suppliers and partners. Several speeches, tours of operations and machine demonstrations will take place on this day.

Sonderhoff USA has steadily promoted the previously little known FIP (foam in-place) technology in the US, which is the process of fully automatic application of liquid seals to produce housing gaskets. Sonderhoff USA presently supplies major suppliers in the automotive, electronics and packaging industries with Fermapor K31 foam seals and the Fermadur potting compounds for sealing door modules, headlamps, brake lights, filters, drum packaging, electrical enclosures and switch cabinets.
