Sonderhoff at Chinaplas 2018

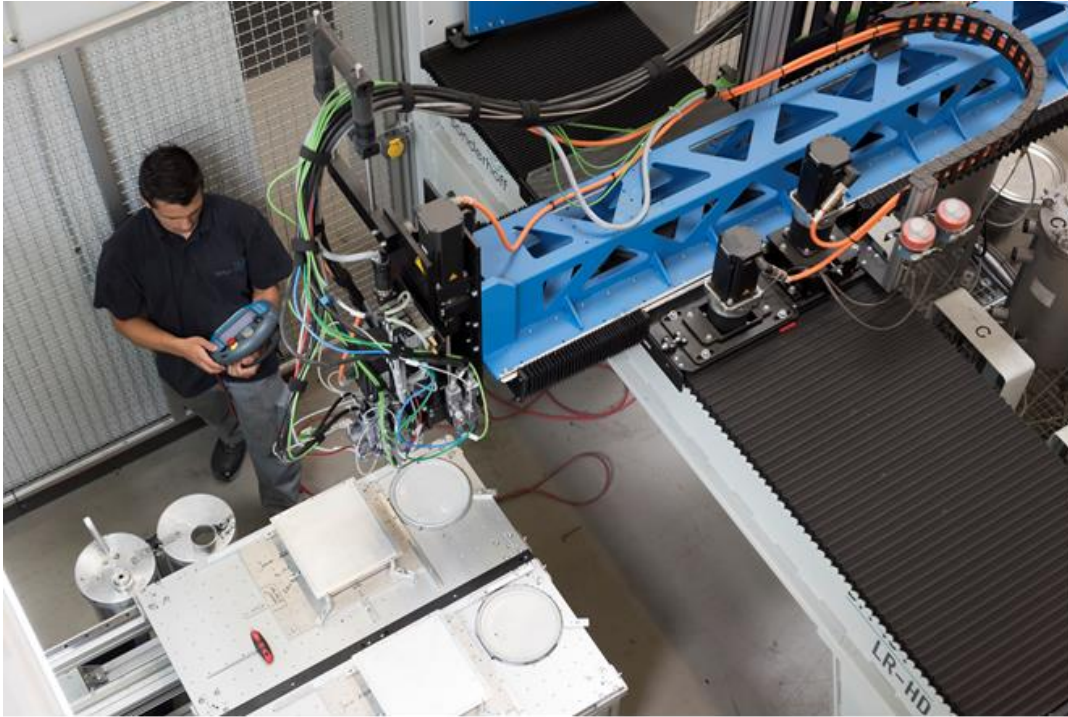

Sonderhoff (Suzhou) Sealing Systems Co. Ltd., part of Henkel AG & Co. KGaA, is a specialist for formed in-place (FIP) sealing technology in China. At Chinaplas 2018, the system supplier of machines, materials and process automation will exhibit in hall 2H, stand 2J85.

At the location of Sonderhoff (Suzhou) Sealing Systems Co. Ltd. in Suzhou's Singapore Industrial Park (SIP), contract manufacturing can grow even further. (Source: Sonderhoff)

Sonderhoff customers in China are offered a broad selection of two-component foam sealing, gluing and potting systems based on polyurethane or silicone. For the automated FIP material application, Sonderhoff is supplying two and multi-component mixing and dosing systems. The company has laid the foundation for further growth with its own polyurethane material production in Suzhou and the expansion of contract manufacturing for the foam sealing, gluing and potting of customer components. Its spectrum ranges from individual sampling of prototypes to small series up to serial production. Sonderhoff (Suzhou) Sealing Systems Co. Ltd. is located in the Singapore Industrial Park in Suzhou. The company has developed very well in the Chinese market since its founding in 2009 as a specialist in FIP sealing technology. With the takeover of Sonderhoff by Henkel half a year ago, the prospects for further growth have improved even further.

The range of products, exhibited at Chinaplas 2018 includes two and multi-component mixing and dosing systems for partially or fully automated material application as well as foam seals, and adhesives and casting resins based on polyurethane or silicone. Customers from very different industries receive customized solutions from Sonderhoff for sealing, gluing and potting of industrial components. The application spectrum ranges from control cabinet construction, electronics, automotive, filters, lighting, photovoltaic and packaging to home appliances.

Sonderhoff (Suzhou) Sealing Systems takes over the sealing, gluing and potting of their components for the customers. (Source: Sonderhoff)

Thanks to its own polyurethane material production for foam gaskets, adhesives and potting, Sonderhoff can plan very flexibly and deliver it to customers in China at short notice. This makes it independent of long import delivery times and strengthens the company's competitive position. In addition, contract manufacturing by Sonderhoff (Suzhou) Sealing Systems is responsible for foam sealing, gluing and potting the components of customers from various industries. The material application with the Sonderhoff systems, for example, also takes place on complex, three-dimensional components and in very narrow groove geometries. At the Suzhou site, Sonderhoff carries out individual prototype and pilot applications as well as small and large-scale production. Due to a continuous increase in orders, new Sonderhoff machines have recently been put into operation. The system concept from Sonderhoff, which offers material, machine and process automation from a single source, remains crucial for success, in China and worldwide.
