Development and production of chemical gasketing, glueing and potting systems

Engineering

Development and production of dispensing machines and automation systems for gasketing, glueing and potting

Services

Custom processing and other services

OPEN TO EVERYTHING, THAT NEEDS TO BE SEALED

Welcome to Sonderhoff!

Global markets and international growth require a successful company to be innovative, flexible and clearly structured.

Established strengths, newly defined.

Paring down to the fundamentals at Sonderhoff means that we are THE system supplier for polymer sealing, glueing and potting systems, dosing machines, automation and application services. Our concept is as simple as it is successful: gasketing, glueing and potting of the highest standard. Or, to put it another way: innovative ideas with our team – under one roof.

Quality – meeting demands is an integral part of our company group culture.

The person is the focus of our company philosophy – whether as a customer, an employee, a supplier or a part of our environment. We demonstrate to our employees that commitment and acceptance of responsibility based on trust and cooperation are rewarded. Maintaining the highest quality for our products and first-class customer relations are explicit objectives at Sonderhoff, each and every day. We see it as every employee's obligation to keep this high quality standard – and to improve it. At every position, from management to assembly. We are currently certified according to ISO/TS 16949, ISO 9001, ISO 14001 and BS OHSAS 18001.

Environmental protection

We feel particularly committed to our environment and future generations. Environmentally sustainable raw materials, products and production processes are therefore always our first choice. Resources and energy are used sparingly and, in addition to waste avoidance, we give priority to recycling. The use of new technologies in manufacturing, processing and applications ensures that our everyday interactions harmonise with people and the environment.

Water

Coldness

Vapours

Dust

Heat

SAFELY SEALED

Sounds simple, but it isn't.

Many components and modules that are used in the manufacture of a diverse range of products, must be tightly sealed after their assembly to ensure that humidity, dust, harmful media or temperature don't have a chance.

These requirements have led to the situation in which seals that are embedded by hand or directly injected are being replaced more often with automated polymer sealing systems. Our system concept is: gasketing, glueing and potting – under one roof.

As a leading company for customised sealing solutions, Sonderhoff provides its customers with multiply patented knowledge and experience from a wide variety of realised applications. Across all levels, on a wide range of materials and various geometries. Always of optimal quality. Precisely sealed. So that Humidity, Dust & Co. stay outside.

CHEMICALS

The right chemistry!

Chemistry is of particular importance to us. On the one hand for our products and services, on the other in the close connections we maintain with our customers and our relationship to the environment. An exact balance ensures the best solution each time.

Always in focus: sealing systems with the optimal physical and chemical properties for the particular purpose as per the customer's requirements.

Selecting the correct raw materials always has priority with us. They must meet high quality standards over the long term, be risk-free, and in the application must be reproducible and dimensionally accurate.

We also offer environmentally degradable and compatible cleaning agents, rinsing agents for low pressure mixing and dosing machines as well as adhesion promoters. Our systematically acquired knowledge, more than 1000 formulations and the innovative power of our entire group guarantee absolute customer orientation, tailored products and solutions in line with market conditions.

Our product families are outlined below:

FERMAPOR® K31 — Polyurethane flexible foam systems

FERMADUR® — Polyurethane potting resin systems

FERMASIL® — RTC-Silicone foam systems

FERMAPOR® DD980 — PVC-Plastisoles

FERMASKIN® — Soft Polyurethane foam surrounded by an elastomeric skin

Of course, all our products are formulated in such a way that current workplace safety and environmental requirements are satisfied.

ENGINEERING

Tailor designed mixing- and dosing plants!

Shorter and shorter product lifecycles lead to ever new forms and variants of the most varied industrial components. Dosing machines and automation solutions that can flexibly be adapted to every requirement are therefore in high demand. Our core competence therefore includes developing, consulting, selling and after-sales support of the appropriate technology for a particular situation, regardless of whether you want to operate a Sonderhoff Engineering Plant as an individual production unit or to integrate it into a complex production line.

System solutions are developed and implemented in close collaboration with our customers – always based on the latest safety standards, technical performance and environmental sustainability.

This is assured through our highly specialised engineers.

Polyurethane, silicone and other reaction materials are applied by using contour robots in freely programmable geometry. CNC-controlled, for 2 or 3 dimensional applications. Mixing and dosing plants developed by Sonderhoff enable correct and proper processing of the material used. Conditioning is dependent on the material, e.g. through homogenising, temperature regulation, nucleation, evacuation and recirculation. Dosing and mixing is done in the appropriate mixing head. Accurate, safe and economically efficient.

Technical innovations such as our patented high-pressure water rinsing system of the Sonderhoff precision mixing heads MK 400 and MK 600, our flow control system, and our drip- and maintenance-free nozzle closure system, modular design and reliable procedures all ensure a profitable return on your investment.

SERVICES

**Our service guarantee:
hand in hand under one roof!**

Higher quality through synergy.

When it comes to contract applications, Sonderhoff offers the complete range of services from the production of individual prototypes and pilot or small series through to full-scale series production. Thus customers who for whatever reasons want to outsource the sealing system from their production chain, or who would like to take the first steps in using this technology together with us, have access to the entire group knowledge.

Sonderhoff as the extended workbench? – No problem.

One of the advantages is being able to carrying out test runs or new developments without disrupting your own production. Sonderhoff also provides additional capacity during customer's production peaks or increases in demand. Our company group ensures the integration of your developments and production processes with practical experience.

If you add up experience, know-how, innovative power, dedication and team spirit into an homogeneous overall concept, the result are synergies you can talk about.

We combine our chemical and technical competence with creative services that offer a programme with a single objective: satisfied customers. This includes supporting our customers from the production of individual prototypes through to taking over large series production as well as consultancy and training. With a team that can always be reached. Personally. Because satisfaction doesn't come from "almost".

ACTIVE LISTENING

The first step to a perfect solution.

Every industry places special demands on their partners, day after day, product for product.

The first step towards customer satisfaction is to understand the customer's requirements. We therefore listen very carefully when a customer is explaining his new tasks.

Our systematically acquired knowledge and the creative innovation of our group are your guarantee for optimal customer focus, tailor-made products and market-driven solutions.

LIGHTING

Let there be light for everybody tomorrow.

Whether street pole lamps, moisture-proof luminaires or sign lamps, or energy-efficient LED lights, the innovative Sonderhoff products, known for their perfect impermeability, can literally be seen on every corner.

To ensure lights can continue to shine optimally also towards harmful environmental influences, Sonderhoff adds its transparent potting to LED systems for their encapsulation, while foam seals perfectly protect light enclosures against moisture, dust and temperature effects.

The highest standards in IP protection make the Sonderhoff sealing and potting systems the first choice of leading light manufacturers. Sonderhoff also offers manufacturers of explosion-proof lights products for obtaining PTB, ATEX or UL accreditation.

Street pole lighting

Sign lighting

Moisture-proof lighting

LED lighting

Foam sealing for light enclosures: polyurethane-based FERMAPOR® K31 and silicon-based FERMASIL®.
Transparent or opaque cast resins for LED lights: Polyurethane-based FERMADUR® and silicon-based FERMA-SIL®.

ELECTRONICS

Electrifying ideas.

Dirt, humidity and other factors can not only render components inoperative or destroy them – when it involves sensitive applications, it can also be life-threatening.

Sealing with Sonderhoff FERMADUR®, a bi-component polyurethane potting resin, reliably protects your electronic components from moisture, dust and mechanical damage.

Whether crash sensors, capacitors or other electronic components – Sonderhoff has the perfect solution for every application and any problem.

Tested a thousand times and approved a thousand times over.

Transformer potting

Relay potting

Capacitor potting

Casting of electronic components with Sonderhoff FERMADUR® potting compounds.

ENCLOSURES

Shut the door and everything's tight.

For enclosures and connection boxes the function of a perfect seal is obvious.

The interior space must be dry and clean and humidity and dust must be excluded. The characteristics of Sonderhoff FERMAPOR® K31 and FERMASIL® sealing foams ensure the highest IP protection classes. Special product types are also tested according to NEMA and UL (Underwriters Laboratories) and achieve classification from UL94-HBF to UL94-HF1.

This is why FERMAPOR® K31 and FERMASIL® sealing foams are used by the leading manufacturers of enclosures and connection box systems.

Powder-coated enclosure panel

Stainless steel enclosure panel

Plastic connection box

Sealing of enclosure components with FERMAPOR® K31 gasketing foam.

Sealing of ceramic stove top

Sealing of washing machine

Sealing of sink

Glueing of microwave glass door

APPLIANCES

Hidden use for the user.

Many products and technical solutions from Sonderhoff are kept hidden and ensure that the end user is satisfied with their choice of product. Whether a vacuum cleaner, a ceramic stove top, a sink or a washing machine – it's always the hidden facts making the difference.

Hidden facts such as reliable sealing or bonding that make household appliances even safer.

Sealing of oven glass door

Sealing of dish washer

Sealing of vacuum cleaner

Sealing of various products with FERMAPOR® K31 and FERMASIL® gasketing systems.

AUTOMOTIVE

Just in time and always tight.

Components and modules that are used in automotive manufacture must remain tightly sealed after their assembly.

Humidity, dust, harmful media or temperature-influences effects can easily become a risk. We leave nothing to chance because quality and safety are paramount at Sonderhoff.

This holds true from the selection of raw materials, their processing through to the safety of the production plant.

Our polymer reaction products for gasketing, glueing and potting, as well as for foam moulding, are dispensed on site and in the widest range of products – across all levels, using the most diverse materials and in the most varied geometries. Today and tomorrow: Sonderhoff stands for flexible solutions – just in time.

Fuel tank cap sealing

Door carrier sealing

...more than 400 different applications for gasketing, glueing, potting and foam moulding.

Oil pan sealing

Brake light (CHMSL) sealing

Light fixture plate sealing

Loudspeaker sealing

Head lamp sealing

Air outlet channel sealing

Number plate light sealing

Timing belt cover sealing

PACKAGING

Drop test passed.

Whether black plate, tinplate, steel, plastic or fibre packaging – the demands placed on modern packaging are as varied as their contents.

The same is true for the demands placed on the respective sealing systems, whether with an approval for the food industry or with UN approval for technical contents. Sealing systems from Sonderhoff offer perfect protection against leakage or contamination, even those caused by drops, shocks and vibrations.

Alternatively, we offer our one component PVC compounds from the FERMAPOR® DD980 range to seal tinplate packaging lids

Clear requirements, clear solution – typically Sonderhoff.

Plastic drum lid

Tinplate pail lid /steel drum lid

Plastic container screw-cap lid

Sealing of various packaging lids with FERMAPOR® K31 gasketing systems.

FILTERS

Only that passes, that should pass.

Whether in air-conditioning or industrial systems, cars, or vacuums cleaners – filter quality is crucial for creating clean air for many productions and products.

Filters need to be well adhered and have perfect sealing to ensure they hold for what they are made for. No sooner said than done – Sonderhoff product developments are provided to leading filter system manufacturers, for use in households, industry or clean rooms.

The FERMAPOR® K31 foam sealing and FERMADUR® potting systems can also feature antibacterial properties to enable use in handling air facilities. They efficiently protect the plastic surfaces of air distribution components against allergenic microorganisms.

Sealing special paper filters

Sealing hepa filters

Foam moulding radial seal filters

Glueing industrial filters

Glueing car air filters

Glueing vacuum cleaner filter cartridges

Various sealings with FERMAPOR® K31 polyurethane foam sealant, and bonding of end caps with FERMADUR® polyurethane potting.

PHOTOVOLTAICS/ SOLAR HEAT

NEAREST TO THE SUN...

To ensure solar panels and photovoltaic systems can work effectively and simultaneously withstand the elements and changes in weather patterns, they need to be rendered impermeable once assembled. Sonderhoff products are used to perfectly seal, bond or cast them for protection against moisture, dust, harmful substances and temperature-related influences.

With our high-quality sealing, gluing and potting products, we provide optimum solutions for solar panels, solar modules, photovoltaic junction boxes, and inverters.

Sealing of PV inverter housing

Potting of PV junction boxes

Glueing of solar panels

Sealing, glueing and potting for various photovoltaic and solar heating applications with FERMAPOR® K31 foam sealing, and FERMASIL® glueing or potting systems.

PRINTING

Brilliant print quality which inspires.

Frequent replacement of print rollers due to different sized printing plates leads to expensive downtime of the printing machine. That's why the graphics industry uses coated print roller sleeves of various sizes and qualities for flexographic printing on foils, cardboard packaging and paper. The sleeve is easy, fast and affordable to replace, with the printing plates simply applied to the surface.

Sonderhoff 2-component polyurethane casting resin FERMADUR® for the rotation casting of print roller sleeves are resistant to solvent-based printing inks and detergents and generates a seamlessly cast coating. It ensures dimensionally stable, highly concentric print rollers, which are crucial for constant register accuracy. The printing inks end up precisely on top of each other, creating a brilliant print image.

The result: reliably reproducible print quality, maximum productivity and greater process stability in the printing plant with Sonderhoff FERMADUR® rotation casting resin.

Coated print roller sleeves for flexographic printing with:

PU hard coating

Conductive PU coating

PU soft coating

Laser-engravable PU coating

READ WHAT OTHERS HAVE WRITTEN ABOUT US

What really counts is the result!

Sonderhoff asked some customers to express their thoughts about us. About our standards and our quality requirements, as well as about the advantages of the Sonderhoff system. An objective evaluation emerged – and not just pretty words.

BOSCH
Technik fürs Leben

ROBERT BOSCH GMBH

When it comes to sealing of our ultrasound-based sensors for vehicle parking aids, BOSCH relies on FERMASIL® silicon foam by Sonderhoff Chemicals. We are a global leader in ultrasound sensors, which work based on the echo-sounding principle used by animals like bats for orientation. The sensors emit short ultrasound impulses which are reflected by barriers. The echo signals are registered by the sensors and analysed by a central control device. BOSCH processes the FERMASIL® silicon foam using highly precise, fully automatic Sonderhoff Engineering mixing and dosing systems. We believe Sonderhoff chemical products and processing machines guarantee high-quality system solutions and reliable ultrasound-based BOSCH driver assistance systems.

RITTAL GMBH & CO. KG

Since its founding in 1961, Rittal has developed into a global player with more than 60 affiliates and more than 11.100 employees. Today we are the leading global system supplier for housing and enclosure technology with more than 10.000 immediately deliverable standard products, a highly sought-after partner in all sectors in industry, engineering and plant construction as well as a trendsetter in all segments of the IT market. Rittal trusts in the established foam process technology from Sonderhoff. We have used the FIPFG (Formed In Place Foam Gasket) process for many years for sealing our high-quality enclosures. We expect innovative strength, flexibility and reliable on time deliveries from our suppliers as well as the ability to support our production facilities with a complete focus on service. These demands are best met by the Sonderhoff Group (Sonderhoff Chemicals, Sonderhoff Engineering and Sonderhoff Services).

MANN+HUMMEL GMBH

MANN+HUMMEL was founded as an automotive supplier in 1941. Since then, we have definitively left our mark on developments in filter technology. In the manufacture of our well-known filter products, we only use production facilities that satisfy our stringent demands for reproducibility and availability. In Sonderhoff Engineering, we have found the right partner for mixing and dosing technology, who, should service be required, also assists us in exactly the way the international automotive supplier industry would wish.

DRÄXLMAIER GROUP FOR BMW

As a supplier for the automotive industry, we are constantly engaged in satisfying the ever-increasing demands of our customers in quality and economic. As we have successfully used the two component polyurethane foam to seal automotive series components for many years, we rely on innovative and tailor-made materials as well as flexible and future-oriented processing plants. A comparison of concepts between the different manufacturers resulted in a clear decision in favour of Sonderhoff Chemicals and Sonderhoff Engineering. The reasons for our decision were the high degree of flexibility, efficiency and security of investment, as well as the competent support during series production, which can only be provided by a solution found “under one roof”.
